YUGUANG (ROGER) BAI

Mathematics Ph.D. Candidate

- @ rogerbai92@gmail.com roger-bai-404a061b4
- **J** 647-573-3158 **O** roger-bai
- Toronto, Ontario, Canada
- roger-bai.github.io/personal-webpage/

PROFILE

Motivated and skilled Ph.D. candidate seeking an entry level position in the cybersecurity sector. Highly capable in quantitative areas as well as being able to explain technical concepts to others. Very interested in using acquired skills and knowledge to improve and protect society as a whole.

EDUCATION

Ph.D. in Mathematics

University of Toronto

Expected Summer 2021

Toronto, ON

Thesis: Cluster Algebra Structure for Mirković-Vilonen Cycles and Polytopes

Notable Course: CSC2426 Fundamentals of Cryptography

Palette x Fields Accelerated Cybersecurity Training

Fields Institute

Nov. 2020 - Jan. 2021

▼ Toronto, ON

Learned a variety of topics such as

• Risk Management, Cryptography, Penetration Testing

EXPERIENCE

Researcher

University of Toronto

- Sept. 2016 Ongoing
- Toronto, ON
- Currently collaborating with two others on a research project for interpreting geometric objects as matrices; finalizing results
- Conjectured my own formula about a relationship between geometric objects and proved it; invited to and presented results at Layola University Chicago

Course Instructor

University of Toronto

- **ä** Jan. 2020 Dec. 2020
- Toronto, ON
- Taught hundreds of students in various disciplines in mathematics, particularly those in linear algebra
- Was one of the first instructors to teach and be in charge of a course during the COVID-19 pandemic, laying the foundation and provided advice for future courses
- Achieved an overall 4.4/5 course evaluation from students

Teacher's Assistant

University of Toronto

- **Sept.** 2015 Dec. 2019
- Toronto, ON
- Worked with and helped a variety of students in areas such as calculus, linear algebra, and MATLAB programming
- Debugged several students' code and helped them understand their own code

KEY SKILLS

Creative Thinking Problem Solving

Excellent Writing and Communication

LANGUAGES

CYBERSECURITY TOOLS

Metasploit Meterpreter nmap

PowerSploit OWASP ZAP Burp Suite

Wireshark Splunk ELK Stack

PROJECTS

Double Encryption in the Cloud

- 苗 Jan. 2021
- A way to upload data to the cloud that ensures end-to-end encryption and prevents the cloud provider from unauthorized access to the data

GitHub

 Helped design the protocol, coded the authentication and integrity parts, and created a demo with .csv files and GCP

Mirković-Vybornov Fusion in the Beilinson-Drinfeld Grassmannian

- Ongoing
- GitHub
- A generalization of the Mirković-Vybornov isomorphism to help compute fusion products

Cluster Algebra Cryptography

- Ongoing
- GitHub
- Personal project to better understand cryptography by trying to create an asymmetric cryptographic algorithm based on the theory of cluster algebras
